## Instrumentation in Analytical Chemistry Volume 2

Stuart A. Borman,  
Editor  
Associate Editor of  
ANALYTICAL  
CHEMISTRY

An anthology of  
articles on the  
developments in  
analytical  
instrumentation from  
the volumes of  
ANALYTICAL  
CHEMISTRY,  
1972-1982

Whether used as a textbook or as a reference on the individual subdisciplines, this volume proves an invaluable resource to not only analytical chemists but to all who have an interest in analytical technology. These 50 articles, first published in ANALYTICAL CHEMISTRY, provide an excellent overview of the entire field of analytical instrumentation and feature state-of-the-art developments. Written by some of the most renowned people in each area, the articles are divided into 11 sections covering the scope of analytical instruments and techniques.

### CONTENTS

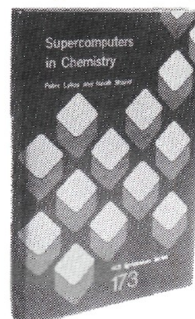

Signal Processing and Image Analysis • Computers and Laboratory Data Management • Atomic and Molecular Spectroscopy • Electroanalytical Chemistry • Gas and Liquid Chromatography • Hyphenated Methods • Mass Spectrometry • Surface Analysis • Nuclear Magnetic Resonance • Flow Methods • Laboratory Instrumentation

414 pages (1982) Clothbound  
LC 72-95641 ISBN 0-8412-0726-7  
US & Canada \$31.95 Export \$38.95

414 pages (1982) Paperbound (Student Edition — minimum order of 10 copies)  
LC 72-95641 ISBN 0-8412-0738-0  
US & Canada \$14.95 Export \$17.95

## Supercomputers in Chemistry

The needs, applications, and opportunities for modern supercomputers in chemical research

An ideal book for computer designers, chemical researchers, computational chemists, policy makers, and all users of computers in scientific research.

### CONTENTS

Vector Processors in Quantum Chemistry • Academic Computer Resources in Japan • Theoretical Chemistry • Integration of Chemical Rate Equations • Chemical Kinetic Sensitivity Analysis • Thermal Ignition of Carbon Monoxide • Problem of Organic Synthesis • Molecular Structure Elucidation • Liquid Molecular Dynamics Simulation • Time-Dependent Polymer Simulations • Macromolecular Structure • Computer Simulation of Biomolecular Systems • Molecular Mechanics Calculations • Programming Language for Supercomputers • Advanced Flexible Processor

278 pages (1981) Clothbound \$31.95  
LC 81-17630 ISBN 0-8412-0666-X

Order from:

ACS Symposium  
Series No. 173

Peter Lykos, Editor  
Illinois Institute of  
Technology

Isaiah Shavitt, Editor  
Ohio State  
University

Based on a  
symposium  
cosponsored by the  
ACS Division of  
Computers in  
Chemistry, the ACS  
Division of Physical  
Chemistry, and the  
U.S. National  
Resource for  
Computation in  
Chemistry.
