For an international, molecular focus
on the toxicological effects of chemical agents

Chemical Research in Toxicology

Published bimonthly by the American Chemical Society

Editor: Lawrence J. Marnett
Department of Biochemistry & Center for Molecular Toxicology
School of Medicine
Vanderbilt University
Nashville, TN 37232
(615) 343-7328

Associate Editors: Frederick P. Guengerich
Vanderbilt University

Paul F. Hollenberg
Wayne State University

In primary research reports,
**Chemical Research in
Toxicology** covers:

- Structure elucidation of novel toxic agents;
- Chemical and physical studies on chemical agents that provide insight into their mode or mechanism of action;
- Experimental and theoretical investigations of the interaction of toxic chemicals with biological macromolecules and other biological targets;
- A range of topics which includes toxicity, teratogenicity, mutagenicity, carcinogenicity, neurotoxicity, and immunotoxicity.

DNA. Reactive
intermediates. Site-specific
mutagenesis. Protein
oxidation and modification.
NMR and X-ray structure.
Quantitative structure-
activity relationships.
Xenobiotic chemicals.
Toxin structure . . .

Every other month, **Chemical Research in Toxicology** reaches throughout the field of molecular toxicology—and around the world—to bring you the most important original research and perspectives. In one comprehensive source, you'll have a direct line to original work on structural, mechanistic, and technological advances relating to the toxicological effects of chemical agents. Issue after issue, you can draw on these articles to advance your own work in:
