## ORTHOPAEDICS

### Aims and Scope

*Current Orthopaedics* presents a unique collection of international review articles summarizing the current state of knowledge and research in orthopaedics. Each issue focuses on a specific topic, discussed in depth in a mini-symposium; other articles cover the areas of basic science, medicine, children/adults, trauma, imaging and historical review. There is also an annotation, self-assessment questions and an exam section. In this way, the entire postgraduate syllabus will be covered in a 4-year cycle. The Journal is cited in: Cochrane Center, EMBASE/ Excerpta Medica, Infomed, Reference Update and UMI Microfilms.
