

# Imagine pH ..

**744  
pH Meter**

The new 744 pH Meter answers the requirements of users working in the lab and plant. Its design has profited from our more than forty years of experience in electrochemistry and incorporates all the features that promote efficient and comfortable operation. The standard accessories include the "Long Life" Solitrode, our newly developed pH electrode with polypropylene shaft, which is both highly precise and robust.

#### The 744 pH Meter

- is handy: 17 cm x 19 cm
- can be fastened to a bar or wall if there is lack of bench space
- is user-friendly: guidance by pictograms
- is flexible: measuring ranges pH 0,00 ... 14,00  
voltage -2000 ... +2000 mV and temperature -170,0 ... +199,9°C
- is precise: the pH value is always displayed together with the temperature and the drift is indicated
- corresponds to GLP/ISO: automatic buffer recognition and calibration
- calibration data and parameters remain stored when the instrument is switched off
- stores automatically up to 9 pairs of measured values, either at given time intervals or at the press of a button.
