

SPECTROSCOPY IN INORGANIC CHEMISTRY

edited by **C. N. R. RAO**, Department of Chemistry, Indian Institute of Technology, Kanpur, India, and **J. R. FERRARO**, Chemistry Division, Argonne National Laboratory, Argonne, Illinois

CONTENTS OF VOLUME 2: J. A. KONINGSTEIN: Electronic Raman Transitions of Rare Earth Ions and Crystal Field Effects. J. R. FERRARO: High Pressure Vibrational Spectroscopy. A. P. B. SINHA: Fluorescence and Laser Action in Rare Earth Chelates. B. G. RAMSEY: Electronic Spectra of Organometal- loids. K. D. J. ROOT and M. T. ROGERS: Electron Spin Reso- nance Spectra of Inorganic Radicals and Radical Ions. J. M. WILLIAMS and S. W. PETERSON: Molecular Structure Deter- mination by Neutron and X-Ray Diffraction. H. A. KUSKA and M. T. ROGERS: Electron Spin Resonance of Coordination Com- pounds. Author Index-Subject Index.

April 1971, about 300 pp., \$18.00

Volume 1: 1970, 422 pp., \$19.50

INTRODUCTION TO MOLECULAR

SPECTROSCOPY: Theory and Experiment

by **E. F. H. BRITTAI**, **W. O. GEORGE** and **C. H. J. WELLS**, all at Kingston Polytechnic, Kingston-upon-Thames, England

Presents a balanced treatment of the principles of molecular spectroscopy and of their use in the determination of molecular structure and in chemical analysis. It also describes commonly available instrumentation and experimental methods. The book describes the principles, instruments and experimental methods of electronic, vibrational, and nuclear magnetic resonance and mass spectroscopy. Each chapter, dealing with one of these branches of spectroscopy, is divided into three sections covering principles, instrumentation and, finally, experiments designed to illustrate the topics discussed in the principles and instruments sections.

1970, 388 pp., \$14.50

PAPER CHROMATOGRAPHY AND ELECTROPHORESIS

by **GUNTER ZWEIG**, Director, Life Sciences Division, Syracuse Univ. Research Corp., Syracuse, N. Y., and **JOHN R. WHITA- KER**, Department of Food Science and Technology, College of Agriculture, Univ. of California, Davis, Cal.

VOLUME 2: PAPER CHROMATOGRAPHY

by **JOSEPH SHERMA**, Lafayette College, Easton, Pennsylvania and **GUNTER ZWEIG**

With contributions by **ARTHUR BEVENUE**, University of Hawaii, Honolulu, Hawaii

An up-to-date treatise devoted to the techniques of paper chromatography. It deals briefly with the history and theory of paper chromatography and covers in detail selected techniques and quantitative methods. The literature is surveyed to mid-1970. The remainder of the book describes the separation by paper chromatography of a wide variety of classes of organic and inorganic compounds including amino acids, fatty and organic acids, purines and pyrimidines, sugars, pesticides, vitamins, antibiotics, pigments, steroids, and many other miscellaneous compounds.

1971, 604 pp., \$27.50

STANDARD METHODS OF CLINICAL CHEMISTRY

VOLUME 6

By The American Association of Clinical Chemists

Editor-in-Chief: **RODERICK MACDONALD**, Harper Hospital, Detroit, Mich.

Series Editor: **J. STANTON KING, Jr.**

This latest volume in a continuing series describes in detail tested and confirmed methods for clinical laboratory deter- minations. It offers the same features that have made pre- vious volumes into reference works of immediate and lasting practical value. All methods presented are appropriate for general use in the average clinical laboratory, methods are given in enough detail to allow their direct use by any compe- tent laboratory technician, and sources of instruments and chemicals, as well as authors' experience with the methods, are given in detail.

1970, 294 pp., \$14.50

THE CHEMISTRY OF NONAQUEOUS SOLVENTS

VOLUME 3: Inert, Aprotic, and Acidic Solvents

edited by **J. J. LAGOWSKI**, Department of Chemistry, Univer- sity of Texas, Austin, Texas

CONTENTS: MARION MACLEAN DAVIS: Bronsted Acid-Base Behavior in "Inert" Organic Solvents. D. F. BUROW: Liquid Sulfur Dioxide. RAM CHAND PAUL and SARJIT SINGH SAN- DHU: Acyl Halides as Nonaqueous Solvents. F. FEHER: Liquid Hydrogen Sulfide. ALEXANDER I. POPOV: Anhydrous Acetic Acid as Nonaqueous Solvent. ALEXANDER I. POPOV: Other Carboxylic Acids. Author Index-Subject Index.

1970, 416 pp., \$21.00

ADVANCES IN MAGNETIC RESONANCE

VOLUME 4

edited by **JOHN S. WAUGH**, Department of Chemistry, Massa- chusetts Institute of Technology, Cambridge, Mass.

CONTENTS: WESLEY T. HUNTRESS, Jr.: The Study of Aniso- tropic Rotation of Molecules in Liquids by NMR Quadrupolar Relaxation. PAUL D. SULLIVAN and JAMES R. BOLTON: The Alternating Linewidth Effect. RAGNAR A. HOFFMAN: Line Shapes in High-Resolution NMR. JEFF C. DAVIS, Jr. and K. K. DEB: Analysis of Hydrogen Bonding and Related Association Equilibria by Nuclear Magnetic Resonance. B. D. NAGESWARA RAO: Nuclear Spin Relaxation by Double Resonance. Author Index-Subject Index.

1970, 354 pp., \$17.50

PHYSICAL PRINCIPLES AND TECHNIQUES OF PROTEIN CHEMISTRY

PART B

edited by **SYDNEY J. LEACH**, Russell Grimwade School of Bio- chemistry, University of Melbourne, Parkville, Victoria, Aus- tralia

CONTENTS: J. H. COATES: Ultracentrifugal Analysis. J. H. BRADBURY: Viscosity. S. N. TIMASHEFF and R. TOWNEND: Light Scattering. R. D. B. FRASER and E. SUZUKI: Infrared Methods. J. C. METCALFE: Nuclear Magnetic Resonance Spec- troscopy. FRANK R. N. GURD: Binding of Protons and Other Ions. H. MORITA: Differential Thermal Analysis. Author Index-Subject Index.

1971, 491 pp., \$24.00

AN INTRODUCTION TO GAS-LIQUID CHROMATOGRAPHY

by **R. ALAN JONES**, School of Chemical Sciences, University of East Anglia, Norwich, England

Provides a basic introduction to the practice of gas-liquid chromatography for organic chemists. Assuming only a basic knowledge of physical chemistry and physics, the book de- scribes the principles of operation of the instrument and the interpretation of the results. An introductory chapter presents sufficient theory for a fundamental understanding of the prac- tical aspects of the technique. The second part of the book comprises tables of reference which will be used for "on the spot" problems during the operation of a gas chromatograph.

1970, 214 pp., \$8.00

RESEARCH TECHNIQUES IN NONDESTRUCTIVE TESTING

edited by **S. S. SHARPE**, Nondestructive Testing Center, Atomic Energy Research Establishment, Harwell, England

CONTENTS: Acoustic Emission. Ultrasonic Spectroscopy. Ultrasound Imaging Systems. Ultrasonic Critical Angle Re- flectivity. Ultrasonic Holography. Optical Holography and Coherent Light Techniques. Data Handling Techniques. Direct-View Radiological Systems. Neutron Radiography. A Communication Network Approach to Sub-Millimetric Wave Techniques in Nondestructive Testing. Multiparameter Eddy Current Concepts. Pulsed Eddy Currents. Microwave Tech- niques. Infrared Techniques. Author Index-Subject Index.

1970, 492 pp., \$23.00
