

digital-type reading

Another first from Sartorius.

Sartorius pioneered in the introduction of analytical balances with a 1000 mg optical range reading direct to 0.1 mg (without interpolation). Now, while most competitive instruments still offer shorter, less practical, optical ranges, Sartorius is first to introduce a new projection scale on which each division is individually numbered. And, this scale is available on models with various sensitivities including a semi-micro version (reading direct to 0.01 mg).

The Digital Read-Out was achieved through an increase in magnification made possible by Sartorius' longer light path—because the scale is located in the base of the housing.

The new image is physically much larger and brighter than scales on other balances, and the higher magnification has also improved reproducibility.

In every respect, weighings are simpler and faster. Reading errors are virtually impossible. Before you buy, compare the Sartorius Projection Scale and the Sartorius Balance to any other model available. You cannot appreciate the difference until you see it. Prices begin at just \$725.

Today, Sartorius is first in balance design.
