

New

Whatman GD/X and ZC Syringe Filters go to great depths to double your efficiency

Increase flow rates with the combined prefiltration technology of graded-density glass microfibers and a variety of membrane filters in a single device

Filters even viscous samples with less hand force than ever before possible

Filters both vertically and laterally for a high flow rate

Doubles the volume of sample filtered compared with other conventional filters

Extends filter life and reduces costly exchanges by trapping large particles in the coarse top layer, retaining medium-sized particles in the interface meshing and smaller ones in the final layer

Double your filtration efficiency today. Whatman provides innovative solutions to even your most difficult applications. For a test sample of new GD/X or ZC Syringe Filters with graded-density glass microfiber prefilters, or for applications assistance, call **1-800-922-0361**.
