

LABORATORY LABELS

THAT
REALLY
STICK

Rapidly replacing old and expensive labeling programs — Laboratory tested tapes and labels can be applied conveniently and inexpensively, at a time saving rate.

Proven to withstand all temperatures ranging from -70° to $+550^{\circ}$ and varying conditions of moisture and humidity, they are scientifically produced with adhesives that really stick.

Write for samples and descriptive literature.
Do it today!

You need this catalog
if you are a user
of optical crystals

This new catalog by Optovac presents definitive data on optical crystals. It is not a re-write of previously available material, but a reference source of useful data for optical designers, spectroscopists and other users.

Among the included topics are crystal fabrication techniques, crystal comparison and selection data, optical maser crystals and research crystals.

Available free on request.

Superb DTA Thermogram necessary for complete interpretation

The resolution and sensitivity recorded in this Stone DTA thermogram provides necessary information for interpretation available from no other source.

Laboratories considering the use of any thermal analysis system are invited to consult with our scientists for recommendation in matching equipment and accessory modules to specific laboratory needs.

The Stone Analytical Systems include:
Temperature Gradient Furnace.
X-Ray Diffractometer Furnace.
TGA and DTA Apparatus with a complete line of interchangeable sample holder modules.

All Stone equipment is of module design to extend applicability to most every conceivable material and technique.
