

RESEARCH IN INTERNATIONAL BUSINESS AND FINANCE

Aims and Scope

Research in International Business and Finance (RIBAF) aims to publish empirical and applied research on issues relating to International Business and International Finance. The editors encourage the submission of high quality, insightful, well-written papers that explore current and new issues in International Business, International Finance, and the common grounds between these discipline areas.

Papers that use new and or novel empirical methodologies to examine topical issues using extensive international data sets are particularly welcome.

Country-level replication studies of key themes in International Business, International Finance, and in Finance are also welcome. In order to qualify as a replication study, the submitted paper must clearly state what is being replicated, why it is important to replicate it, why the particular replication is of interest to international business and finance scholars, and how the replication analysis contributes to the process of validating, negating, clarifying, or refining existing theory and/or evidence.

For all submissions, high quality, well-written papers are essential. In order to respect the time constraints of RIBAF's committed reviewers, submissions that do not meet these high standards will be returned to the authors without seeking peer review.

The scope of topics that are most interesting to RIBAF readers include the following:

- Culture in international business and finance;
- Economic geography in international business and finance;
- Firm-level internationalisation patterns and strategies;
- International business and financial history;
- International corporate governance, standards, and organisations;
- International financial integration and regulation;
- International knowledge transfer;
- International portfolio diversification;
- Methodology in international business and finance;
- Modes of internationalisation such as networks, alliances, joint ventures, FDI, M&A;
- Subsidiary management and performance.
